Service	

Intended Use

The 3M Headset Intercom System, Model C960, is designed to provide 2–way radio–frequency audio communication in quick service drive–through restaurants and convenience stores.

Misuse of the Model C960 could result in poor performance and/or undesired operation.

FCC Information

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

(Blank Page)

Introduction	The 3M Model C960 Headset Intercom System is a wireless intercom system designed for high reliability, compactness, and ease of service.						
	The system can be programmed to operate on any one of 16 different channels to provide high–quality audio performance and reduce the possibility of interference between neighboring wireless systems.						
Systems Configuration	The system can be configured in one of five ways depending on the number of menu signs (lanes) at the facility and the type of communication desired.						
Single-Lane Standard Communication	The <i>single–lane standard communication system</i> provides standard communication (talk <i>or</i> listen) for facilities that have one menu sign.						
System	The system consists of one base station and one or more headsets and battery chargers.						
Single-Lane Duplex Communication	The <i>single–lane duplex communication system</i> provides duplex communication (simultaneous talk and listen) for facilities that have one menu sign.						
System	The system consists of one base station and one or more headsets and battery chargers.						
Dual-Lane Standard Communication	The <i>dual–lane standard communication system</i> provides standard communication (talk <i>or</i> listen) for facilities that have two menu signs.						
System	The system consists of two independent systems - one dedicated to menu sign 1 and the other dedicated to menu sign 2. The headsets are programmed to work with one system or the other and are labeled accordingly (1 or 2).						
Dual-Lane Duplex Communication	The <i>dual–lane duplex communication system</i> provides duplex communication (simultaneous talk <i>and</i> listen) for facilities that have two menu signs.						
System	The system consists of two independent systems - one dedicated to menu sign 1 and the other dedicated to menu sign 2. The headsets are programmed to work with one system or the other and are labeled accordingly (1 or 2).						
Cross-Lane Communication	The <i>cross–lane communication system</i> provides duplex communication (simultaneous talk <i>and</i> listen) for facilities that have two menu signs.						
System	The system consists of two duplex systems that are connected to a cross-lane module. The headsets are programmed for either lane 1 or lane 2.						
	During <i>off–peak</i> hours, the cross–lane module can be turned ON to link the two systems and enable one operator to simultaneously talk <i>and</i> listen to customers at menu sign 1 or menu sign 2 or with other headset operators.						
	During <i>peak</i> hours, the cross–lane module can be turned OFF to separate the systems and enable menu sign 1 operators to talk to customers at menu sign 1, and menu sign 2 operators to talk to customers at menu sign 2.						

Systems Components The number of system components and the procedures necessary to operate them vary depending on the system configuration. However, three components are common to all system configurations.

Base Station

The base station is the interface between the customer at the menu sign and the headset worn by the operator. See Figure 1.

Figure 1. Base Station

Headset

The headset is a wireless, battery–powered, two–way radio used by the operator to communicate with menu sign customers and with other store personnel who are wearing headsets.

Headsets feature a light–weight design to provide for comfort. The headset pads can be easily removed and reinstalled, so operators can have their own set of pads for improved hygienic conditions. See Figure 2.

Figure 2. Headset

Battery Charger

The battery charger charges headset batteries in approximately 1.5 to 2 hours. The charger is available in 3–slot and 6–slot versions. See Figure 3.

Figure 3. 3–Slot and 6–Slot Battery Chargers

Base Station

The base station controls and indicators are shown below.

Headset

The headset controls are shown below.

Figure 5. Headset Controls

1	ON Switch	Press the ON switch to turn on the headset.				
2	OFF Switch	Press the OFF switch to turn off the headset.				
3	Volume UP ▲ Control	Press the volume up \blacktriangle control to increase the volume in the headset earpiece.				
4	Volume DOWN▼	Press the volume down \blacksquare control to decrease the volume.				
	Control	When either volume control is pressed, the headset emits a short tone to indicate the new volume level. There are 15 different volume levels from minimum to maximum.				
		If the headset volume is at its maximum level, a low, continuous tone sounds when the volume up \blacktriangle control is pressed. A low, continuous tone also occurs when the volume reaches minimum level and the volume down \blacktriangledown control is pressed.				
		When the headset is turned on, headset volume automatically returns to the previously–set level. Note that even when set to its lowest level, headset volume is not turned completely off.				
5	T1 (Talk Lane 1) Switch	Press and hold the T1 (Talk Lane 1) switch to talk to the customer at the menu sign in lane 1. Release the switch to listen.				

6	T2 (Talk Lane 2) Switch	For dual–lane systems, press and hold the T2 (Talk Lane 2) switch to talk to the customer at the menu sign in lane 2. Release the switch to listen.
		For single-lane systems, T2 can also be used to talk to lane 1.
7	Page Switch	Press and hold the P age switch to talk to internal personnel without being heard by the customer at the menu sign. Release the switch to listen. (With the switch released, you can hear both menu sign customers and internal paging.)
8	Talk Lock Switch (Hands Free)	For duplex systems, press the talk lock switch once to talk and listen to the customer. This enables hands-free operation.
9	Battery Release	Push the battery release up and hold it there while sliding the battery out of the headset housing.
10	Battery	This rechargeable battery provides power to the headset.
11	Headset Programming Jack	This jack accepts the programming cable from the base station to allow the headset to be programmed to the same channel as the base station.
12	Microphone/Filter	The microphone sends the headset operator's voice to the menu sign or other headset operators. The filter is a protective cover for the microphone.
13	Earphone/Earpad	The <i>earphone</i> is a speaker that broadcasts the voice from the customer at the menu sign or from other headset operators. The replaceable <i>earpad</i> covers the earphone and cushions the operator's ear to provide comfort.
14	Headband Pads	The headband pads cushion the operator's head to provide comfort.
15	Headband Adjustment Slide	The headband adjustment slide is used to increase or decrease the size of the headband.
16	Headband Width Adjustment Tab	The headband width adjustment tab is used to increase or decrease the headband pad pressure.

Battery Chargers

The 3-slot and 6-slot battery charger controls are shown below.

- **1** Charging Slots The charging slots hold batteries during the recharging cycle.
- 2 Conditioning
and/or
Charging SlotThis dual-function slot holds a battery during conditioning and recharging
cycles. This slot functions as a conditioning slot when the conditioning button is
pressed.
- 3 Charging Status The charging status indicators light RED, GREEN, or ORANGE to indicate charging status:

RED indicates the battery is being charged.

GREEN to indicate the battery is fully charged.

ORANGE to indicate the battery is defective.

- 4 Conditioning
ButtonPress the conditioning button to condition a battery that is inserted in the
conditioning/charging slot.
- 5 Conditioning The conditioning status indicator lights YELLOW to indicate the battery in the conditioning slot is being conditioned.
- **6 Power Supply Jack** This jack accepts the plug from the power supply cord.
- 7 **Power Supply** The power supply provides power to the battery charger.

Introduction

Checking the Headset for Proper Fit

Adjusting Headband Width

To prepare the headset for use, you will need to check the headset for proper fit and install the cap clip (if desired).

To ensure effective operation and comfort:

- Adjust the headband width.
- Adjust the headband size.
- Position the ear pad and microphone.

Adjust the headband width until the headband pads hold the headset firmly in place without causing discomfort. The headset can be worn with the ear pad against either ear. The three width settings are shown in Figure 6.

If the headset is too tight:

- 1. Fold the headband in toward the ear pad.
- 2. Push the width adjustment tab away from the center headband pad.
- 3. Fold the headband out against the adjustment tab.

If the headset is too loose:

- 1. Fold the headband in toward the ear pad.
- 2. Push the width adjustment tab toward the center headband pad.
- 3. Fold the headband out against the adjustment tab.

Figure 6. Headband Width

Adjusting Headband Size Adjust the size of the 2-piece headband until the ear pad rests against one ear and the headband pads rest just above each ear.

- Slide the headband *apart* to make it *larger*.
- Push the headband *together* to make it *smaller*.

Figure 7. Headband Size

Positioning the Ear Pad and Microphone

Rotate the microphone boom up or down so that its tip is in line with the corner of your mouth. Do not bend the rubber microphone boom. See Figure 8.

Figure 8.

Installing the Cap Clip

To install the cap clip:

1. Remove the side headband pad (from above the ear pad). Insert a dime in the slot on the headband pad housing and twist the dime to release the tab. See Figure 9.

Figure 9.

- 2. Extend the headband to maximum size.
- 3. Using a ball point pen, release the headband latch and slide the 2-piece headband apart. See Figure 10.

4. Slide the cap clip onto the cap band just above the ear.

5. Slide the cap clip over the inside half of the adjustable headband until it snaps into position over the headband pad mount. See Figure 12.

Figure 12.

System Startup	System startup includes turning on the base station and each headset that will be used.							
Turning On the Base	To turn on the base station:							
Station	1. Slide the power ON/OFF switch to the ON position. Check to see that the POWER indicator lights.							
	2. Slide the VOLUME switch to the desired position (DAY or NIGHT).							
Turning On the Headset	To turn on the headset, press the ON switch located on the transceiver housing. A single tone will sound in the earphone to indicate the headset has been turned on.							
Operating Modes	The system has several operating modes. The number of available operating modes depends on the system configuration (<i>single-lane vs dual-lane, standard communication vs duplex communication, etc.</i>).							
Standby Mode	In the standby mode, the headset is on and waiting to receive communication from the menu sign or other headset operators. This mode is available with all system configurations.							
Talk/Listen Mode	Use the talk/listen mode to talk to the customer at the menu sign. This mode available with all system configurations.							
	Single–Lane Standard or Duplex Communication Systems							
	1. A <i>single beep</i> alert tone sounds in the headset at 2–second intervals when the system detects a customer (vehicle) at the menu sign.							
	2. When you hear the alert tone, press and hold T1 <i>or</i> T2 to talk to the customer at the menu sign. Release T1 <i>or</i> T2 to listen.							
	Dual–Lane Standard or Duplex Communication Systems							
	In dual–lane systems, some headsets are programmed to communicate with Lane 1 and others are programmed to communicate with Lane 2. The headsets are labeled accordingly.							
	1. An alert tone sounds in the headset when the system detects a customer (vehicle) at the menu sign:							
	• The alert tone for Lane 1 is a single beep that repeats at 2–second intervals.							
	• The alert tone for Lane 2 is a double beep that repeats at 2–second intervals.							
	2. When you hear the <i>single beep</i> alert tone, press and hold T1 and talk to the customer at menu sign 1. Release T1 to listen.							
	When you hear the <i>double beep</i> alert tone, press and hold T2 to talk to the customer at the menu sign 2. Release T2 to listen.							
	Cross-Lane Communication Systems							
	Communication During Peak Hours							
	During peak hours, the cross-lane module is turned <i>off</i> and the system functions like a dual-lane duplex system. Some headsets are programmed to communicate with Lane 1 and others are programmed to communicate with Lane 2.							

Communication During Off-Peak Hours

During off-peak hours, the cross-lane module is turned *on* to enable a single operator to communicate with customers in either lane (1 *or* 2).

- 1. An alert tone sounds in the headset when the system detects a customer (vehicle) at the menu sign:
 - The alert tone for Lane 1 is a single beep that repeats at 2–second intervals.
 - The alert tone for Lane 2 is a double beep that repeats at 2–second intervals.
- 2. When you hear the *single beep* alert tone, press and hold T1 and talk to the customer at menu sign 1. Release T1 to listen.

When you hear the *double beep* alert tone, press and hold T2 to talk to the customer at the menu sign 2. Release T2 to listen.

Talk Lock Mode ("Hands Free") Use this mode to operate "hands free." The talk lock mode is only available with duplex system configurations.

In this mode, the headset automatically switches from standby to talk/listen when a customer is detected at the menu sign. The headset automatically switches back to standby when the customer leaves the menu sign.

✓ Notes

"Hands free" operation (talk lock mode) prevents all other headset operators from talking.

"Hands Free" operation will not work in cross lane mode.

To use the talk lock mode, press the talk lock switch on the transceiver housing. To return to normal headset operation, press T1 or P.

Use this mode to talk to other operators who are wearing headsets without being Page Mode heard by the customer at the menu sign. This mode is available with all system configurations. To page another operator, press and hold the page switch. Release the page switch to listen. ✓ Note If you are not a menu sign operator, do not use the page mode while the menu sign operator is communicating. Doing so may interrupt or prevent communication between the menu sign operator and the customer. **Page Monitor Mode** Use this mode to listen for pages from other operators (without hearing the communication to and from the menu sign). This feature is convenient for managers and supervisors who only want to hear page communication. This mode is available with all system configurations. To use the page monitor mode:

1. Turn the headset OFF. See Figure 13.

Figure 13. OFF Switch

2. While pressing and holding the page switch, turn the headset ON. This locks the headset in the page monitor mode. See Figure 14.

Figure 14. Page Switch and OFF Switch

To respond to a page, press P (page switch).

To return to normal headset operation:

- 1. Turn the headset OFF.
- 2. Turn the headset ON.

Special Considerations

When using the talk/listen mode or the page mode, keep the following things in mind:

- Communication between the menu sign operator and the customer may be heard by several people.
- Only one headset operator can talk at a time.
- In the talk/listen mode, communication **from the headset** is heard by menu sign customers and other operators who are wearing headsets.
- In the talk/listen **and** page modes, communication **from the menu sign** is heard by other operators who are wearing headsets.

Headset

Replacing the Battery

When the battery voltage is too low, the headset sounds a short, low–volume tone at seven–second intervals to alert the operator to install a fully charged battery. The "battery voltage low tone" continues for two minutes after which the headset turns off automatically to prevent damage to the batteries.

✓ Note

When installing a battery, make sure it is fully charged. It is important to remember that an *unused* C960 battery loses five percent of its charge per week. If a batteries has not been used for several weeks, make sure to charge prior to use.

To replace the battery:

- 1. Push and hold the battery release. See Figure 15.
- 2. Push the discharged battery out of the transceiver housing.
- 3. Insert a *fully charged battery* in the housing with the notch facing the battery release. Make sure the battery is fully inserted (battery release clicks). See Figure 15.

Replacing the Side Headband Pads

To replace the side headband pads:

- 1. Insert the edge of a dime into the slot on the headband pad housing. See Figure 16.
- 2. Twist the dime to release the tab.

Replacing the Center Headband Pad To replace the center headband pad:

- 1. Insert the edge of a dime between the main headband and the top headband pad and pry up to remove the pad. See Figure 17.
- 2. Snap the new pad into place.

Figure 17.

Replacing the Ear Pad	To replace the ear pad, remove the worn/damaged ear pad from the ear cup and replace it with a new pad.							
Battery Charger								
Location	The battery charger should be placed on a flat surface such as a desktop or table in a clean, dry environment.							
Cleaning the Contacts	If the indicators fail to light during charger operation, clean the contacts using an alcohol-moistened cotton swab.							
Batteries								
Care, Handling and	Avoid dropping batteries.							
Storage	Do not carry batteries in your pockets or leave them in hot, damp or dirty places.							
	Clean the battery contacts periodically using an alcohol-moistened swab.							
	Be careful not to short the battery contacts together.							
	Do not set the batteries contact-side down on a bare metal countertop-especially if it is damp.							
Battery Voltage Low Tone	When the battery voltage becomes too low, a short, low–volume tone sounds in the headset at seven–second intervals to alert the operator to replace with a fully charged battery.							
	The "battery voltage low tone" continues for two minutes after which the headset turns off automatically to prevent damage to the batteries.							
Charging Batteries	To charge a battery, insert the battery in one of the charging slots as shown in Figure 18.							
	• The indicator lights RED to indicate the battery is charging.							
	• The indicator lights GREEN to indicate the battery is fully charged.							
	• The indicator lights ORANGE to indicate the battery is defective.							
	✓ Note							
	Discharged batteries require $1-1/2$ to 2 hours to charge.							

To condition a battery:

- 1. Insert the battery in the charging/conditioning slot as shown in Figure 19.
- 2. Press the conditioning button within 2 seconds after inserting the battery. The indicator lights YELLOW to indicate the battery is being conditioned.

Figure 19.

Disposing of Batteries	To help protect the environment, C960 rechargeable batteries which have reached the end of their useful life should be disposed of in accordance with local requirements.					
Making Sure Batteries are Ready for Use	 Follow these tips to make sure batteries are always ready for use: Have an extra battery for each headset. This helps ensure that a fully charged battery is always available. 					
	 Recharge a low battery as soon as it is removed from the headset. When a battery is low, repeat tones are heard in the headset. 					
	• Keep the battery contacts clean: both those on the battery and those in the headset battery holder. To clean the contacts, use an alcohol-moistened cotton swab.					
	• Remember that a battery recharge takes approximately 1–1/2 to 2 hours.					
	• Avoid removing and reinserting batteries while they are charging (charging status indicator is RED).					
	• Remember that batteries discharge fastest during Talk and Page operation. Avoid unnecessary communications.					
Important Information about	Keep the following information in mind as you operate the system and as you establish operating procedures:					
C960 Rechargeable Batteries	• Each 3M battery contains an internal protective device to prevent unsafe discharge rates. But, as with any battery, avoid shorting across the battery contacts with metal items. Never carry a battery in a pocket or place it in a drawer where it can accidentally be shorted by keys, coins etc.					
	• Have adequate charging capacity for the number of headsets in your syste One 3–slot battery charger will handle up to three headsets. Use of more than three headsets requires a 6–slot battery charger.					

- Batteries perform best at moderate temperatures. Extremes of heat and cold reduce their performance.
- An unused C960 battery loses five percent of its charge per week. Batteries that have not been used for several weeks should be recharged before use.

Programming the Headset for Cross-Lane Operation

The headsets are factory programmed for single–lane operation to enable the operator to press either T1 or T2 to communicate with lane 1.

For cross–lane systems, the headsets must also be programmed to enable communication with either lane 1 *or* lane 2. With the cross–lane module turned ON, the lane 1 **or** lane 2 operators can press T1 to talk to to lane 1 customers **or** T2 to talk to lane 2 customers.

To program the headset for cross-lane operation:

- While pressing and holding *both* the T1 and T2 switches on the headset, turn the headset ON. Hold all three switches for at least 5 seconds. See Figure 20.
- Audible tones will be heard in the headset earpiece, indicating that the headset is programmed for cross-lane operation.

Figure 20.

Reprogramming

To remove this function and lock T1 and T2 back together, first turn the headset OFF, then hold down either T1 or T2 while pressing ON for 5 seconds. You will hear an acknowledging beep. (Holding down T1 configures the headset to be a lane 1 headset; holding down T2 configures it for lane 2.

Enabling/Disabling The talk lock feature provides hands free operation in duplex communication systems. With the talk lock feature enabled, the headset automatically switches the Talk Lock from standby to talk/listen when a customer is detected at the menu sign. The Feature headset automatically switches back to standby when the customer leaves the menu sign. To enable or disable the talk lock feature: Turn the headset OFF. 1. 2. Press and hold the L button while pressing and holding the ON button for 5 seconds until audible tones are heard. This indicates that the feature has been enabled or disabled. 3. Check headset operation to determine if the talk lock feature has been *disabled* or *enabled*. With the talk lock feature *enabled*: The headset automatically switches from standby to talk/listen when a customer is detected at the menu sign. The headset automatically switches back to standby when the customer leaves the menu sign. ✓ Note The headsets are shipped with the talk lock feature enabled.

Changing Channels if Interference is Encountered

Symptoms of Interference:

- The operating range between the base station and the headsets gets very short, sometimes 25 feet or less.
- Normally, you will hear nothing to indicate interference. Occasionally, you might hear a whistle or a chirp in the background, but seldom, if ever, will you hear talking.
- The Talk or Page LED flickers briefly causing one of the following:
 - a. The system may leave the STANDBY mode, and go into the LISTEN mode with no vehicle alert heard.
 - b. The system may drop out of TALK LOCK by itself.

Solutions:

- Change the base station to another channel, at least three channels away. A better solution is to change jumper J3 to Lane 2 if possible.
- Locate and shut off other 900 MHz devices in the building, such as cordless phones, video systems, and speaker systems.
- In cases where a cellular phone tower is nearby, certain combinations of cell frequencies may cause interference. In some cases, changing channels may have no effect. Please call you local 3M Dealer, or 3M F.S.T. Communications Products Technical Service (800–328-0033) in these cases.

The C960 system is capable of operating on any one of eight different channels. You can correct these types of interference by changing the base station operating channel. To do this:

1. Pull outward on the right side of the base station half-cover and then lift and remove the cover. See Figure 21.

Figure 21.

2. With the base station turned on, press and release the Channel Select switch once. (This advances the system to the next channel.) One of the red indicators (1–8) will light, indicating the newly selected channel.

Figure 22.

3. Press the RESET switch to "read" the new channel selection into the microprocessor.

✓ Note

When two systems are used in a cross–lane application, both base stations **must** be set to the same channel.

- 4. With the headset turned ON, plug the flat end of the programming cable into the headset programming jack. See Figure 22.
- 5. Plug the other end of the programming cable into the base station programming jack. See Figure 22.
- 6. Audible tones will be heard in the headset earpiece, indicating that programming is complete.
- 7. Repeat Steps 1 through 6 to program the rest of the headsets.

The headset is now programmed to the same channel as the base station. If interference continues to occur, repeat the channel programming procedure. After seven channel changes, the original channel will again be encountered. If none of the 8 channels are interference–free, try 8 additional channels on lane 2 by following the steps below: **Note: These steps may be used for single–lane systems only.**

- 1. On the base station, move jumper J3 to LANE 2.
- 2. Press the RESET button, or turn the base station OFF, then back ON.
- 3. Program all headsets with the programming cable by repeating the steps listed previously in "Changing Channels if Interference is Encountered."

Outdoors, sound travels best at night when air temperatures are cooler and background noise is reduced. To allow you to reduce the volume of the menu sign speaker to a lower, pre–set nighttime level, the base station has a VOLUME DAY/NIGHT switch. See Figure 23.

Normally, the VOLUME DAY/NIGHT switch is always left in the DAY position.

Changing the Day/Night Switch Setting Adjusting the

Volume

Monitor Speaker

However, if local ordinances require quieter nighttime operation of the menu sign, move the VOLUME DAY/NIGHT switch to the NIGHT position.

If the system has an optional monitor speaker, adjust its volume using the following procedure:

1. With the base station turned ON, insert a small straight–blade screwdriver into the MONITOR VOLUME access hole. See Figure 23.

2. Turn the volume control clockwise to increase the volume or counterclockwise to decrease it.

Introduction

To use the following troubleshooting guide, locate the problem in the left column and look for the problem's possible causes and corrections in the middle and right columns. Possible causes are listed in the order in which they are most likely to happen. Check for possible causes in the given sequence to help isolate the problem.

System Troubleshooting

	Problem		Possible Cause		Solution
1.	No communications. All headsets hear static.	1.	The base station is not ON.	1.	Turn the base station ON. Make sure the power transformer is plugged into the wall outlet <u>and</u> into the base station power receptacle. If the red power light does not come on, check for power at the wall outlet.
		2.	Base station and headsets are not programmed to same channel.	2.	Reprogram the headsets with the programming cable.
		3.	The Base Station is defective.	3.	Call for authorized service.
2.	A single headset hears static.	1.	Headset is not programmed to same channel as base station.	1.	Reprogram the headset with the programming cable.
3.	A single headset hears static. Programming cable has no effect.	1.	Defective programming cable.	1.	Try to program other headsets with the same cable. If they won't program, replace the cable.
		2.	Defective headset.	2.	If the other headsets program OK, the single headset needs repair.
4.	A single headset is dead. No static is heard.	1.	The headset is not turned on.	1.	Press the ON button.
		2.	The battery is discharged.	2.	Replace the battery with a fully charged one.
		3.	The headset is defective.	3.	Call for authorized service.
5.	No vehicle alert tone in headset.	1.	No power to the vehicle detector.	1.	Plug the vehicle detector into power outlet or replace the detector fuse.
		2.	Vehicle detector is "locked up."	2.	Remove power to vehicle detector for a few seconds to reset the detector.
		3.	The base station alert tone volume is set too low.	3.	Adjust alert tone volume.

 All headsets will not go into Standby (silence) when the vehicle leaves the menu sign. 	1.	This is normal when a pulse (air switch) type of vehicle detector is used.	1.	Press the Page switch to silence the menu microphone.
	2.	There is a large metal object near the loop in the driveway (if a loop is used).	2.	Remove the object.
	3.	The Loop detector is "locked up."	3.	Unplug the loop detector from the AC outlet and plug it back in to reset the detector.
	4.	Defective vehicle detector.	4.	Call for authorized service.
 Audio on all headsets cuts out or is interrupted. 	1.	The cause could be radio interference. These are symptoms of interference:	1.	Change the channel on the base station to one at least three channels away.
		 The operating range between the base station and the headsets gets very short, sometimes 25 feet or less. Normally you will hear nothing to indicate interference. The Talk or Page light flickers briefly causing the system to leave standby mode, and go into listen mode with no vehicle alert heard. The system may drop out of Talk Lock by itself. When pressing the Channel Select button on the Base Station, the channel lights move sluggishly or not at all. 		 If using a single base station, move jumper J3 to the lane 2 position. This provides 8 additional channels from which to choose. Locate and shut off other 900 MHz devices in the building, such as cordless phones, video and speaker systems, and video monitors.
	2.	Loose or frayed wiring.	2.	Call for authorized service.
	3.	Poor location of Base Station (behind large metal objects, too far from work area, etc.).	3.	Relocate the Base Station, or add an additional Base Station to extend the range of the system.

8.	No Talk or listen from the	1.	The base station is turned on.	1.	Turn the base station OFF.
menu sign when usin backup wired interco	menu sign when using the backup wired intercom. The C960 system works OK	2.	No power to the backup intercom.	2.	Turn the backup intercom on or plug in its power transformer.
	Croo system works ore.	3.	The volume controls are set too low on the backup intercom.	3.	Turn the volume controls up.
		4.	Defective backup intercom or wiring.	4.	Call for authorized service.
9.	No Talk or Page to other headsets from a single headset,	1.	Dirt or grease under Talk or Page Switch.	1.	Call for authorized service.
